MULTILAYER EXTRUSION OF ANGIOPLASTY DALLOONS ADSTRACT OF THE DISCLOSURE

laminated inflatable, method o E producing inextensible expander members having substantially composite properties enhancing their use on intravascular catheters, such as angioplasty catheters is described. Diverse polymeric compounds of differing properties are coextruded to create a multilayer parison. The parison is subsequently drawn and expanded in a blow molding operation to yield an expander member exhibiting enhanced properties burst-strength, limited radial including lubricity, expansion, bondability, and rupture characteristics.
